

Problem		Solution	Unique Value Proposition		Competitive Advantage	Target Audience	
Problems We Will Solve Wrong urbanization, material losses, and loss of life caused by earthquakes.	Our Problems as a Start-Up Receiving the data needed for tests. Limited time and financial limitations.	Operational Solutions Observatory data can be used. For buildings and their general state, government institutions' data can be used.	Accessibility Improved Quality of Life AI advantage		Technology Our project is an AI that makes predictions about earthquakes. It holds data about the buildings, and former seismic activities in the area where AI is working on. It includes the materials used in buildings and their age as well as the general structure of the terrain to make predictions.	People living in earthquake-prone areas Construction Companies	Insurance Companies Government
Existing Alternatives		Key Metrics			Channels		
Old-fashioned methods Construction companies and government may use their old-fashioned methods for urbanization such as steel reinforced concrete structures without deeper knowledge of the area.		Successful completion of the testing phase of the project Publishing the project in web browsers and app stores		Web Browser Internet Advertisement App Stores			
Cost Structure				Sources of Income			
Server + Hosting Extra workers				Processed Data Service Data services are provided to the government, construction companies, and municipalities for better urbanization.
